UNIFIED COMMUNICATIONS SET TO EXPLODE IN 2011

*Don Viar of Epic Technologies Shares
Insights on Technology's Rapid
Growth Among SMBs With
International Organization*

COOKEVILLE, NASHVILLE, KNOXVILLE — April 28, 2011 — Epic Technologies, a leading unified communications provider, announced expectations of heavy industry growth for the coming year during an interview with Technology Assurance Group (TAG), an international organization of unified communications companies spread throughout the United States and Canada. The TAG organization monitors sales, financial performance and other economic indicators among technology providers. "It's exciting to see that small to mid-sized businesses (SMBs) are ramping up acquisition of the latest technology across the country and that even some of the toughest pockets of the nation are beginning to show signs of strong growth," stated Don Viar, Managing Partner of Epic Technologies.

Several factors are contributing to the turnaround and technology is driving the next bull market. Historically, technology has proven itself to be one of the first sectors to pull the economy out of a recessionary period and business owners are investing heavily in disruptive technologies that cut

costs and improve employee productivity.

One of the most influential and recent technological breakthroughs in business communications is Session Initiation Protocol (SIP). In simple terms, SIP supports any form of real-time communication regardless of whether the content is voice, video, instant messaging, or a collaboration application.

Additionally, SIP enables users to inform others of their status, their availability, and how they can be contacted before a communication is even initiated. "SIP is reinventing the way we communicate and our customers now have an upper hand on their competition," commented Viar.

Another powerful technology making its way into is the SMB marketplace is Hosted Voice over Internet Protocol (VoIP). Hosted VoIP serves the needs of entrepreneurs and enterprises alike, by delivering powerful features such as improved call quality, valuable disaster recovery tools, and applications designed specifically for telecommuters and remote workers. Included in the system are advanced features such as unified messaging, automatic call distribution, auto attendant, call recording, call flow reporting as well as traditional telephony features.

A growing trend among business owners is to outsource the management of their IT networks

with managed IT services.

Consequently, this is stimulating the economy since these services are designed specifically to assist companies in maintaining and supporting their network and IT infrastructure. Types of services may include remote network monitoring and reporting 24 hours a day, 7 days a week, firewall monitoring, intrusion detection, patch assessment and vulnerability scanning, preventative tasks, disaster recovery, data backup and regular performance analysis.

"Today's marketplace demands excellence from all areas of a business and several of the products and services we provide are enabling our customers to increase their profitability and gain a competitive advantage," stated Mr. Viar. Competition may be fierce, but we rest easy knowing that our customers can react more quickly and with greater efficiency than their competitors."

Don Viar was interviewed by TAG regarding his views on the future of technology because he is well-known in the industry, possesses substantial technical expertise and has built a strong reputation in his/her community. Dale Johnson, President of TAG added, "Don» has always been able to peer around the corner and see what's coming so he can help his customers take advantage of what's on the horizon. His organization expends a tremendous amount of

effort to reside on the leading edge of technology but he does it simply because it is the right thing to do. We are proud to be associated with a technology futurist like Don.”

ABOUT EPIC TECHNOLOGIES

Epic Technologies is one of the leading providers of business communication solutions in the United States. Built upon a network of strategic relationships with clients and vendors, Epic has quickly grown to be a trusted business partner for complex voice, data, nurse call, and network infrastructure solutions. We build relationships as a trusted business partner with each of our clients and exceed their expectations, knowing

that we will succeed when our partners succeed.
